

Digital Ledger Issuance & Settlement for UN SDG Projects

Community Biogas Programmes

- Carbon funding for biogas to ensure that biogas digesters work properly in rural areas.
- Installation of rainwater harvesting systems and rural off-grid solar systems to help with electricity in villages.
- Biogas programmes generating carbon offsets are considered to have strong community benefits aligned with the United Nations Sustainable Development Goals (UN SDGs). According to the IFC (a member of the World Bank Group), they have a delivery model that enhances the health, safety, and economic well-being of these communities.

Crop Land Improvement Project

How is ZERO13 involved?

Enables the digitisation of these credits by providing a blockchain ledger to UCR integrated into ZERO13

Ensures that project developers working with their partners such as carbon credits supply-side aggregation brokers are able to digitally trade and settle the credits into the market efficiently

Ensures that project developers get the best price with real-time delivery-versus-payment to confirm that buyers obtain the credits they paid for and the supplier secure the funds from the sale
